Experiment 5: Mobile Application Incorporating Localization Features Using Figma

Aim:
To design a wireframe for a mobile application that incorporates localization features using Figma

Procedure:

1. Open Figma and create a new design file.
2. Select the Frame tool and create mobile screen frames.
3. Add a splash screen with the application name and location icon.
4. Design an onboarding screen to introduce location-based services.
5. Create a home screen with a map showing nearby places.
6. Design a place details screen displaying name, distance, ratings, and directions.
7. Create location settings to manage location permissions and accuracy.
8. Design a saved places screen and a profile screen with language settings.
9. Review the wireframe and save or export the design.

Output:

Result: The mobile application wireframe incorporating localization features was successfully designed using Figma.
