Experiment 7: Cellular System Performance Dashboard Using Figma

Aim: To develop a dashboard prototype in Figma displaying performance criteria for a cellular system.

Procedure:

1. Open Figma and create a new design file.
2. Select the Frame tool and create a desktop dashboard layout.
3. Add the title “Cellular Network Performance Dashboard”.
4. Create cards to display key performance metrics such as signal strength, network coverage, call success rate, handoff success rate, and network latency.
5. Add charts or graphs to visualize network performance.
6. Use suitable colors, icons, and labels to make the dashboard attractive and easy to understand.
7. Add a sidebar with options such as Overview, Network Status, Performance, and Settings.
8. Connect screens or buttons using Prototype mode if interactivity is required.
9. Review the dashboard, align the elements, and save or export the design.

Output:

Result: A cellular system performance dashboard prototype was designed successfully using Figma.
